Description

Eppendorf® kits use Eppendorf® Safe-Lock™ tubes. These sturdy 1.5mL tubes have a Snap-Cap top and are compatible with Next Advance's Blue, Gold and Storm microcentrifuge tube-sized models from their popular Bullet Blender line of tissue homogenizers.

RINO® kits use Next Advance's RINO® tubes, which they make specifically for their Bullet Blender line. The kits below are designed to be used with their Gold and Storm Bullet Blender microcentrifuge tube-sized models. They are strong, durable, and contain an integrated rubber seal in the cap to provide an extra layer of protection against sample loss.

Bullet Blender Bead Lysis Kits

Use these four steps to determine which type(s) you need.

1. Choose bead type required (color coded based on type of tissue sample).
2. Choose Eppendorf® (Snap-Cap) or RINO® (Screw-Cap) tubes.
3. Choose type (RNase-free or non RNase-free)
4. Choose quantity (50 or 250)
